Ensure Sample Integrity (/news/laboratory-products/3/biosampling_systems/ensure_sample_integrity/17800/)

BioSampling Systems (Paris) provides full sample management solutions (software, automate, readers, accessories, consumables), with the aim of making the laboratory safer and improving the quality of sample storage. BioSampling Systems will be launching the new NEO Plate 96 at MEDICA 2011. This plate is designed to guarantee the traceability of the samples, ensure sample integrity, improve tracking efficiencies and satisfy customer's biobank needs. As this plate is monoblock, the tubes cannot be moved. That means users can still have full positive identification without the need for a scanner. Single microtubes can be extracted using the Cracker tool. Neo Plate 96, with its 96 detachable wells and an SBS footprint, is resistant to most organic solvents and provides sample storage in -80°C freezers. This plate is available in different volumes, including 70µL, 500µL and 1mL. Select the optimum size plate to make the best possible use of the available freezer space.
